# SCAMpump Token Whitepaper

## Introduction
Welcome to the world of **$SCAM (SCAMpump)**, where the name itself is a middle finger to the traditional crypto world. Here, we blend the absurd with the educational, creating a meme coin oasis where scams go to die.

## The SCAMpump Story
Born from the wreckage of countless crypto scams, $SCAM was forged by founders who've had their wallets drained and their dreams dashed.
They've turned their pain into a mission: to create a crypto space where fun, transparency, and community are the real currencies. Here, we're all about sharing the laughs and the profits, ensuring scams are as extinct as the dodo.

## Transparency - It's Not Just a Buzzword
We're as open as a nudist beach. Every transaction is laid bare on our site, and our code? It's more public than a celebrity's dating life on BscScan. Scamming on $SCAM would be like trying to sneak out unnoticed from a silent retreat.

- **Contract Address**: 0xc870da9f4b5b97955ea729b0f7374164fff6b8d5

## Token Burns - Because Less Is More
We've torched 8 million tokens out of the initial 69 million (heh, nice) and won't stop until we reach 42 million (the answer to life, the universe, and everything). Each burn makes your tokens potentially more valuable. Our CEO, Charles, personally commits to this fiery ritual monthly, proving his balls are as big as his wallet. Check out the "Burn" section to see the magic happen.

## Performance - Who Needs Red Candles When You've Got Green?
Only 4 red candles in 22 months? That's not just luck; that's some fucking stable shit. In the meme coin wild west, we're the town that never gets raided. This stability comes from a mix of strategic planning, community love, and a team that's in it for the long haul, not just the quick buck.

SCAM

$SCAM
We can't scam you
even if we wanted to

## Security - No Exit Scams Here
At launch, we burned all the liquidity tokens. That's right, we sent them to the BNB burn address where they're as retrievable as your dignity after a night out. This move guarantees we can't pull an exit scam even if we wanted to. Here's your proof:

- **LP Burn Transaction**: View on BscScan

## Token Mechanics

- **Total Supply**: 69,000,000 tokens
- **Burning Mechanism**: 5% of each transaction is incinerated until we hit 42 million, making your tokens scarcer and potentially more valuable.
- **Transaction Fee**: Another 5% goes into the development wallet to fund shit like celebrity YouTube promos because why the fuck not?

## Development Account

- **Address**: 0x10044472add5856dbe1ca09a4c236d382a80966b

## Developer Wallets
Transparency extends to our financials. Here are the wallets where we keep our tokens:
- **CEO Charles Bergoglio**: 0xd7f1BCDbE36706b2a4105261743b3922879d60FE
- **Gryphus**: 0xc14d8718a7429b234886c736b5e4d48ecdc58387
- **Nautilus**: 0x44e092cc2d3859bc4e8042deaec634e14b699e71

We hold a significant number of tokens in these wallets. This is indeed a risk factor, as large token holdings by developers could potentially affect market dynamics. However, we've never sold a single token since inception, demonstrating our commitment:

- **Token Usage**: These tokens are used for new listings, community support, and other beneficial activities.
- **Future Sales**: If we ever decide to sell tokens, it will be in small, controlled amounts, with 100% transparency. We'll announce any potential sales days in advance across all our channels including Telegram, Twitter, and Discord.

# Exchange Listings and Costs

All listings on exchanges, Dextools.io, and Coinmarketcap have been privately funded by CEO Charles Bergoglio. He's so committed to $SCAM that he's been covering these costs out of his own pocket, refusing to dilute the token supply for funding. This extends to many promotional activities and other project expenses, showcasing his dedication to $SCAM's success.

## The Community - More Like a Family
We're not just investors; we're a bunch of meme-loving, crypto-savvy weirdos who support each other. From shitposting to sharing knowledge, we've got your back.

## Growth Potential - Your Ticket to Lambo Land
With a tiny market cap and a burning mechanism, your investment could multiply faster than rumors at a high school. We're here to make everyone a winner, not just the early birds.

## Educational Value - Learn or Be Scammed
We're here to teach you the ins and outs of crypto, turning every scam victim into a scam survivor.

# Roadmap - What We've Done and What's Next
# What We've Achieved:

- Idea, planning, team building
- Contract development and blockchain integration
- Website and design creation
- Social media presence
- Token launch on Pancakeswap and Poocoin
- Transparency infrastructure
- Listings on Coinmarketcap and Coingecko
- Centralized exchange listings
- 2500 Hodlers and growing
- SCAM Lottery
- ScamSwap integration
- Community promotions
- Own Telegram bot

**What's on the Horizon:**

- App in the Playstore to burn SCAM tokens via ad revenue
- Bigger marketing campaigns with influencers
- Staking fund in AI coins with half the rewards used to burn SCAM
- NFT collection and lottery
- Own NFT platform with fees contributing to token burns
- Aiming for 20,000 Hodlers
- Deflationary target of 42M tokens
- Presence at a Blockchain event in Dubai
- Major CEX listings
- A fun-to-use mobile app
- Target of 50,000 Hodlers
- Special events and surprises for the community
- Mobile game in Playstore to further burn tokens
- Launch of our own L1 SCAM Coin with an airdrop for existing holders

In **$SCAM**, we've crafted not just a token but a movement against the bullshit of the crypto world. Join us for the laughs, stay for the gains, and let's make scamming a thing of the past.

In **$SCAM**, we keep it short, sweet, and to the point. No misleading charts in our whitepaper, just the essentials. If you're uneasy about the poor team details, look at our track record. We're committed to transparency, growth, and fun.

Remember, do your own research because, in crypto, the only constant is volatility. But with $SCAM, at least you're in safe, transparent hands.
